

5-MIN SETUP

@KYLECRAICHY · OPERATOR FIELD GUIDE

CLAUDE IN CHROME

Put an AI agent **inside your browser** — it reads the page, clicks, and does the busywork while you watch. Here's how to install it and connect it, step by step.

NO FLUFF. JUST THE SETUP.

BEFORE YOU START

Two things have to be true before the extension will work. Check these first so you don't hit a wall halfway through.

REQUIREMENT 01

A paid Claude plan

Browser use is a beta on **paid plans** — Pro, Max, Team, or Enterprise. If you're on the free plan, upgrade first at claude.ai.

REQUIREMENT 02

Google Chrome (desktop)

It runs on **Chrome only** right now — not Brave, Arc, Edge, or mobile. Use Chrome on your computer.

● GOOD TO KNOW

This is a beta feature. Claude can **see and act on the tab you point it to** — but you stay in control and approve what it does. You're not handing over the keys; you're getting a co-pilot.

INSTALL IT

Six clicks from zero to installed. Do them in order.

1

Open the Chrome Web Store

In Chrome, head to the Chrome Web Store — or go straight to claude.com/claude-for-chrome for the direct link.

2

Find the official extension

Search "**Claude**" and open the listing by **Anthropic**. Make sure it's the official one before installing.

3

Add to Chrome

Click "**Add to Chrome**," then confirm on the pop-up. The extension installs in a couple of seconds.

4

Sign in to Claude

When prompted, **sign in with your Claude account** — the same one tied to your paid plan.

5

Pin it to your toolbar

Click the **puzzle-piece icon** at the top-right of Chrome, then the **thumbtack** next to Claude so the icon stays visible.

6

Grant the permissions

Approve the permissions it asks for. These are what let Claude **read the page and take actions** for you.

CONNECT & RUN IT

Installed. Now point it at your browser and give it a first job.

OPEN

Bring up the side panel

Click the **Claude icon** in your toolbar. A side panel opens and **stays visible while you browse** — that's your command line for the web.

CONNECT

Give it the window

When Claude needs to act, it sends a **connect request**. Click **Connect** and it takes control of that Chrome window — only when you say so.

GO

Hand it a first task

Open any page and ask: **"summarize this," "pull the key data into a list," "fill this form."** Watch it work the tab in real time.

STAY SAFE (IT'S BETA)

- ▶ Only let it act on **sites you trust** — keep an eye on what it's doing.
- ▶ **You** handle anything sensitive: never let it type passwords, card numbers, or hit "buy/send."
- ▶ Start small. Build trust with low-stakes tasks before you turn it loose.

THAT'S THE WHOLE SETUP. **NOW GO PUT IT TO WORK.**
